Code:

MCU00H?AC multifunction transducer with RS485, for L.V. / M.V.
Multifunction transducer, suitable for three-phase three or four wires systemsfor L.V. / M.V. with unbalanced load (single phase on demand),
even with distorted waveforms.

MCUC0H?DC multifunction transducer with RS485 output
Multifunction transducer for DC systems.
The voltage input is directly wired to the line, while the input proportional to the current is derived from shunts.
